

wireframe v 1.0 (web)

<function>

// header remains fixed
// footer remains fixed
// astrology logos in circles

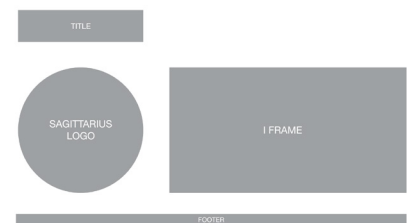

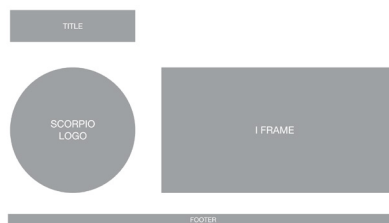

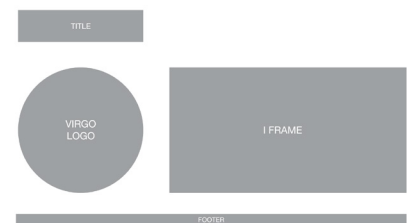

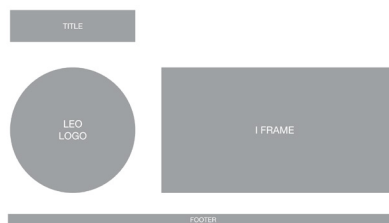

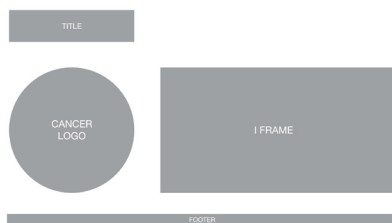

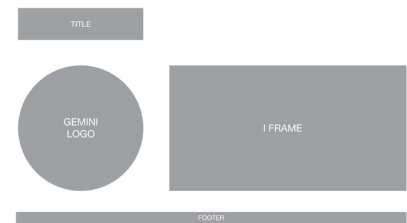

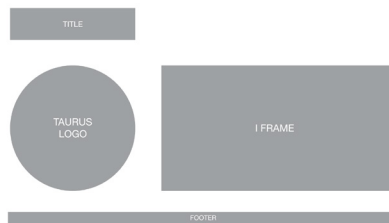

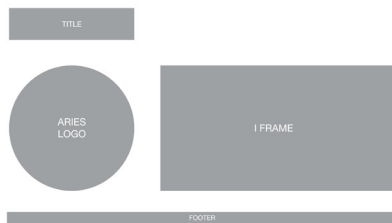

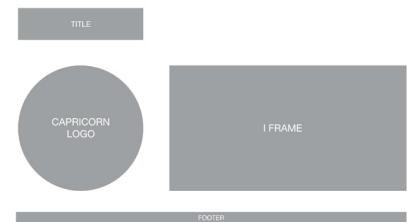

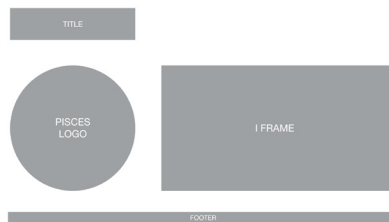

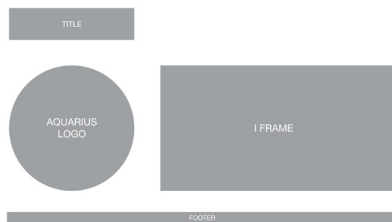

<implimentation>

// jquery
// when mouse hovers over circle => action
// when click on circle => transition to sign page

<design>

// circles act as buttons
// text under circles
// all twelve astrological signs visible

for my final project, I will be building a website that will pull in an external source site into iframes.

<function>

// header remains fixed
// footer remains fixed
// astrology circles remain fixed
// iframe calls in external site

<implimentation>

// iframe embedded
// when mouse hovers over circle => action

<design>

// title, logo, iframe, and footer are in the same location on all twelve pages of astrology signs
// iframe will bring site into window within page
